

Shipping Label -- Barcode Format

REQUEST:

Many times system needs are governed by customer requests. An Epicor client needed to change their shipping labels to show critical information in barcode and human readable form for one of their major clients.

SOLUTION:

Based on their customer's design requirements, the Azelea font was used to develop this label format in the third-party software called **Bartender**. Then Epicor's BAM feature was used to automate the label print job. If the shipment is going to the specific customer, this label is auto-printed. If the shipment is going to a different customer, the standard shipping label prints.
