

## **Bartender Shipping Label**

### **REQUEST:**

An Epicor client wanted their package labels to print automatically when their packslip was printed. Each label needed to show the *Quantity* in the package as well as the *Carton Count*, i.e. 1 of 3

### **SOLUTION:**

First, this label format was developed in the third-party software called **Bartender**. Then Epicor's BAM feature was used to automate the label print job. Lastly, we setup the Bartender software's 'commander' tool so that the print job is sent to the pre-determined printer. Now, when the packslip is printed, the bartender label's file is also generated.
