

Data Sharing Experts

For over 15 years, we have worked closely with clients of all sizes, all industries, and all across the United States with their reporting and data sharing needs. Our goal is to provide expert assistance no matter the business application.

As the healthcare industry continues to streamline systems, data sharing is becoming system critical. This leads to questions of data compatibility and manageability.

Compatibility

Whether using a state of the art EHR system or legacy software, incompatibility of in-house systems can cause double entry, dual reporting, manual data crunching, and wasted labor hours. We can help synch your systems:

- ⇒ Using a standard reporting software, we implement a batch reporting process to pull data from one software, and prepare it to be imported into another software
- ⇒ Move demographic data, scheduling, or financials accurately and consistently between disparate systems to improve work flows and save labor hours
- ⇒ Migrate data from legacy systems into a new EHR system without manual data entry.

Manageability

Managing a healthcare organization means managing data. Put the power of your data into the hands of your entire staff.

- ⇒ Using a standard reporting software, we develop custom management tools specific to your needs
- ⇒ Prepare for audits, confirm Meaningful Use details for attestation, monitor quality assurance, analyze metrics, track performance, improve risk assessments

Having the right tools for data sharing will greatly enhance work flows, staff productivity, and patient experience.

We look forward to discussing your data sharing needs.

About our logo:

At Crystal Certified, we pride ourselves in guiding our clients to successful connectivity, which is why our logo features a stone figure known as an *inukshuk*. These splendid and natural guideposts, made of unworked stones, can be found throughout the world and are used by the Inuit for communication, guidance and survival. The traditional meaning of the inukshuk is "You are on the right path."
